ClimaTec**

# EFFECTIVE VENTILATION TOTALLY WITHOUT ELECTRICITY

## Kömmerling 88 centre seal ClimaTec

Insulated living spaces keep the heat in and the cold out – actually a very positive effect. But at the same time, they promote a moist indoor climate and thus mould growth. The effective and elegant solution to prevent this: The ClimaTec 88 ventilation system for windows from Kömmerling. The ventilation mechanism ensures a controlled supply of fresh air, totally without the need for manual ventilation or a power source. This minimises heat loss, reduces energy consumption, protects the building fabric and creates an all around healthy indoor climate.

### USER-FRIENDLY

- Self-regulating, easy-to-clean ventilation system
- Guards against insects thanks to ventilation grilles
- Automatic wind pressure regulation
- Tested sound insulation up to 42 dB (SSK4)
- Ideal for holiday flats and weekend homes

### INNOVATIVE

- Ventilation mechanism concealed in the outer frame rebate and therefore almost invisible
- Tightness against driving rain and passage of air as per DIN and EU standards
- Ventilation as per DIN 1946-6 and DIN 18017-3

### SUSTAINABLE

- Minimises high air humidity and the risk of mould
- Complies with the German Energy Savings Act (EnEV)
- Ensures a controlled supply of fresh air
